PROFESSIONAL PROFILE

Versatile engineer with 7+ years of hands-on experience bridging physical operations and digital solutions. Proven ability to diagnose complex systems (industrial machinery, fleet management, software architecture), develop data-driven tools (MERN Stack, Python, SQL), and deliver measurable operational improvements. Equally comfortable troubleshooting hydraulic failures in mining equipment or optimizing ETL pipelines for real-time analytics. Seeking roles (remote or on-site) in Quebec's industrial or tech sector where hybrid technical expertise creates unique value.

WORK EXPERIENCE

Full-Stack Development Engineer

Generation Chile — Providencia — July 2025 – October 2025

- Designed and deployed a MERN stack medical platform centralizing clinical histories, prescriptions, and exams.
- Implemented role-based access control (RBAC) securing sensitive patient data with JWT authentication.
- Delivered a production-ready solution reducing data fragmentation in healthcare workflows.

Planner / Technical Planning Secretary

Consorcio Acciona Ossa Pizarrotti (Codelco) — Calama — December 2023 – January 2025

- **Strategic Analysis & Data Centralization:** Consolidated dispersed maintenance data (Excel, SAP) into structured SQL databases for a fleet of 100+ heavy mining equipment, transforming reactive management into data-driven decision making.
- **Financial Control:** Tracked and reported workshop supply expenses, generating monthly reports for a budget averaging \$2M CAD (1.5B CLP), ensuring precise monitoring of operational costs.
- **Process Optimization:** Automated daily KPI reporting (MTBF, MTTR, OEE) and spare parts logistics, significantly improving data integrity and reducing budget deviations.

Systems Coordinator and Fleet Analysis

STP Santiago S.A — Maipú — June 2021 – August 2023

- Developed VBA automation scripts processing telemetry data for 400+ buses, reducing report generation time by 30%.
- Designed ETL pipelines migrating 5 years of historical maintenance records to a centralized database.
- Built Power BI dashboards for executive decision-making, improving fleet availability by 15%.

Independent Automotive Technician

Self-Employed — Paine, Chile — 2014 – 2020

- Diagnosed and repaired complex electronic and mechanical faults in 30+ vehicles monthly, specializing in "unsolvable" diagnostic cases.
- Maintained a 95% customer satisfaction rate through systematic troubleshooting and transparent communication.
- Managed client relationships, pricing, and parts sourcing autonomously.

TECHNICAL PROJECTS

- **Medical Information Platform:** MERN stack application with RESTful API, MongoDB database, and responsive React frontend. GitHub: Medula-Chile
- **Fleet Analysis Automation:** Python + VBA scripts for data extraction, transformation, and visualization from legacy systems.
- **Professional Portfolio:** React-based website showcasing dual profile. GitHub: brunochc/WEB

TECHNICAL SKILLS

Software Development:

- JavaScript (Node.js, React, Express)
- Python, HTML5, CSS3
- RESTful APIs, Git/GitHub

Data & Analytics:

- SQL (Oracle, MySQL), MongoDB
- ETL Pipelines, Power BI
- VBA Macros, Power Query

Industrial Systems:

- SAP-PM, Maintenance KPIs
- Automotive Diagnostics (OBD-II)
- Heavy Machinery (Hydraulics, Electronics)

Certifications:

- Oracle Cloud Infrastructure (OCI)
- Full-Stack JavaScript (Generation)

EDUCATION

Engineering in Machinery, Automotive & Electronic Systems

INACAP — March 2014 – October 2019

Civil Engineering in Computing (2 years completed)

Universidad Tecnológica Metropolitana — March 2012 – March 2014

LANGUAGES

English: B2 (Technical documentation and professional communication)

Spanish: Native
